Sequence 147, Application No. US2005015391741

GENERAL INFORMATION:
APPLICANT: AL-MARMODD, SALMAN
APPLICANT: COLIN, SYLVIE
APPLICANT: COLIN, SYLVIE
TITLE OF INVENTION: GENES INVOLVED IN REGULATING ANGIOGENESIS, PHARMACEUTICAL
TITLE OF INVENTION: PREPARATIONS CONTAINING SAME AND APPLICATIONS THEREOF
FILE REFERENCE: BMA-04-120
CURRENT APPLICATION NUMBER: US/10/934,998
CURRENT FILING DATE: 2004-09-03
PRIOR APPLICATION NUMBER: PCT/FR03/00695
PRIOR PLING DATE: 2003-03-04
PRIOR PLING DATE: 2002-03-04
PRIOR FILING DATE: 2002-04-11
PRIOR FILING DATE: 2002-04-11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                              The present DNA sequence is a fusion construct pIL2LsolCD19, comprising leader peptide of human interleukin 2 (hIL2), 12 amino acids from the mature N-terminus of hIL2 and soluble CD19 (solCD19) coding region, having apyrase activity. This produces high levels of solCD19 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting amagiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, cabolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombosic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, seconlusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360

The present sequence is coding region of pIL2SolCD39, a fusion construct encoding sol(soluble)CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infartation, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemiar dischaemia, thrombosic disorder including coronary strety thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis,
                                                                                                      unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-associated isohaemic disorder; lung ischaemia; thrombolytic; cerebral ischaemia; thrombolytic disorder; coronary artery thrombosis; cerebral artery thrombosis; intracardiac thrombosis; venous thrombosis; peripheral artery thrombosis; coagulopathy; deep venous thrombosis; psripheral artery thrombosis; coagulopathy; deep venous thrombosis; psripheral artery thrombosis; ransient ischaemic attack; thrombus formation; occlusion; stenosis; restenosis; antianginal; cardiant; cerebroprotective; antiarteriosclerotic; vasotropic; anticoagulant; coronary ischaemia; vascular occlusion; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inhibiting platelet activation and recruitment, useful for treating a mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39 polypeptides.

The present DNA sequence is a fusion construct pIL2LFlagSolCD39, comprising the leader peptide of human interleukin 2 (hIL2), 12 amino acids from the mature N-terminus of hIL2, a linker, FLAG tag sequence and soluble CD39 (solCD39) coding region, that has apyrase activity This coluble CD39 (solCD39) is constructed by removing the N- and C-transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, catheroscalerosis, paripheral vascular occlusion, precelampsia, embolism, clatcher-associated ischaemic disorders including coronary and cerebral ischaemic thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and thrombosis formation or reformation, occlusion, reocclusion, stenosis or thrombosis

The present sequence is the coding region of soluble CD39(solcD39) expression plasmid. This was used for the transient expression of solCD39 protein in mammalian expression systems. SolCD39 is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia a thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PB), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, recoclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           720
